EOS M 400

Proven DMLS quality for industrial production

With a building volume of 400 x 400 x 400 mm, EOS M 400 allows the production of large metal parts on an industrial scale – directly from CAD data and with no need for tools.

- A 1 kW laser boosts productivity due to higher build rates and increased layer thickness.
- Bilateral recoating of powder material reduces non-productive time.
- A recirculating filter system with automated cleaning reduces filter changes and extends filter lifetime, significantly reducing filter costs.
- Wide range of materials: from light metals to stainless and tool steels to superalloys.
- Easy handling through a high degree of automation in workflow and operation.
- Extensive monitoring features ensure high process stability and part quality.
- Intuitive user interface, flexible software tools and a variety of additional equipment fulfill industrial production requirements.
